A paragraph can open with one leaf the size of a letter, set with `\florilegiumornament{leaf}`. Each ornament in a document gets a shape of its own, , and keeps it from one build to the next; `seed=random` draws a new one every time.

 `size=2.4em` makes it larger, `ink=5B2A1F` paints it in another color , and `angle=30` turns it.

Any primitive will do: .
